Practical 11: Jira Automation

A. Create an Automation Rule (Trigger → Condition → Action).

B. Configure rule (e.g., When issue is moved to Done → send email / auto-assign).

Steps:-

- 1.Open the required Jira project and go to **Project Settings → Automation**.
- 2.Click on **Create rule** to create a new automation rule.
- 3.Select **Issue transitioned** as the trigger and choose **Done** as the required status.
- 4.Add a suitable **Condition**, such as checking the issue type or priority, if required.
- 5.Select an **Action**, such as **Send email** to a user or **Assign issue** to a particular user, and configure its details.
- 6.Give the rule a suitable name, review the complete **Trigger → Condition → Action** workflow, and save the automation rule.

Output:-

The top screenshot shows the Jira 'Automation' page for the 'AC board' project. It features a 'Create automation' button and a 'Manage automations' section. The bottom screenshot shows the 'Automation' page in the 'Space settings' for 'ABP Company'. It displays an 'Example flow' with the following steps: 'Add a trigger', 'Add a condition', 'Add a branch', and 'Add an action'. The 'Next' button is visible at the bottom of the flow builder.

This screenshot shows the first step of a Jira Automation rule configuration. The rule is titled "Untitled flow" and is set to trigger when the "Status" field value changes. The configuration panel on the right shows the trigger type "Field value changed" with "Status" selected as the field to monitor. The change type is set to "Value added". The "For" section shows a dropdown menu with options: "Create work item", "Transition work item", "Edit work item", and "Assign work item". The "Next" button is visible at the bottom right of the configuration panel.

This screenshot shows the second step of the Jira Automation rule configuration. The rule is titled "Untitled flow" and is set to trigger when the "Status" field value changes. The configuration panel on the right shows the condition type "Work item fields condition". The field to check is "Status", and the condition is set to "equals". The value to compare against is "Done". The "Next" button is visible at the bottom right of the configuration panel.

This screenshot shows the third step of the Jira Automation rule configuration. The rule is titled "Untitled flow" and is set to trigger when the "Status" field value changes. The configuration panel on the right shows the "Add a step" section with a dropdown menu for "Action", "Condition", "Branch", and "Controls". The "Action" option is selected, and the "Next" button is visible at the bottom right of the configuration panel.

C. Test and enable automation rules.

Steps:-

1. Create or select a test issue in the Jira project.
2. Move the issue to Done so that the configured trigger is activated.
3. Check whether the selected action, such as email notification or automatic assignment, is performed correctly.
4. If the test is successful, enable the automation rule and verify that its status is Active.

Output:-

The screenshot shows the Jira Automation interface for the 'ABP Company' space. The left sidebar lists navigation options: Details, Summary, People, Permissions, Notifications, Automation (selected), Features, Toolchain, Workflows, Work Items, Versions, Components, and Apps. The main area is titled 'Spaces / ABP Company / Space settings / Automation' and shows an 'Artificial Intelligence' automation rule. The rule is configured with the following steps:

- Value changes for** (Trigger): Status
- Condition applied** (Condition): Status equals Done
- Send email 'nandchaumvlu@gmail.com'** (Action): Assignee Artificial Intelligence

The rule is currently **Enabled** and has a **3 days left** warning. A confirmation message states: 'Your flow has been turned on. How was your automation experience? (optional)'. The interface includes a search bar, a '+ Create' button, and a zoom level of 100%.
